Fitness/Social Media Application
Github Repo Link: https://github.com/yzzqwd/CS546-Final.git

Group Members (Group 3):
 Chu, Qiushi
 Naiburg, Joseph
 Tartaglia, Ava
 Yang, Zhuo

The idea of this application would be to allow users to create an account and track their fitness progress/ weight-loss progress. They would be allowed to connect with friends and participate in friendly competition whether it be for weight loss or exercise goals. They can post pictures as if it was a social media app and allow their friends to comment, or like.

Core Features:
- Main Page: Create an account/ Sign up that leads to the main page of the main features
- Exercise Tracking: Allow users to log their daily exercise
- Health Tracking: Tracking their weight progress along with data like their height, gender, and any health deficiencies (availability to make public or private)
- Interacting with other users (Posting photos, liking posts)
- Groups: This would allow users to add friends to a group to compete in competition between each other

Extra Features:
- Post to other Social Platforms: Post your progress to Facebook/Twitter etc.
- Become a verified trainer on app
- Tracking diet: adding daily food consumption
- Messaging availability
